### HER2:

Current standard treatment landscape in HER2+ mBC

Third line options and beyond:

- Guidelines recommendations:

- Recent efficacy and safety results in the post

  - T-DM1 setting

  - Margetuximab – SOPHIA

  - Neratinib – NALA

  - DS8201 – DESTINY-Breast01

  - Tucatinib – HER2CLIMB

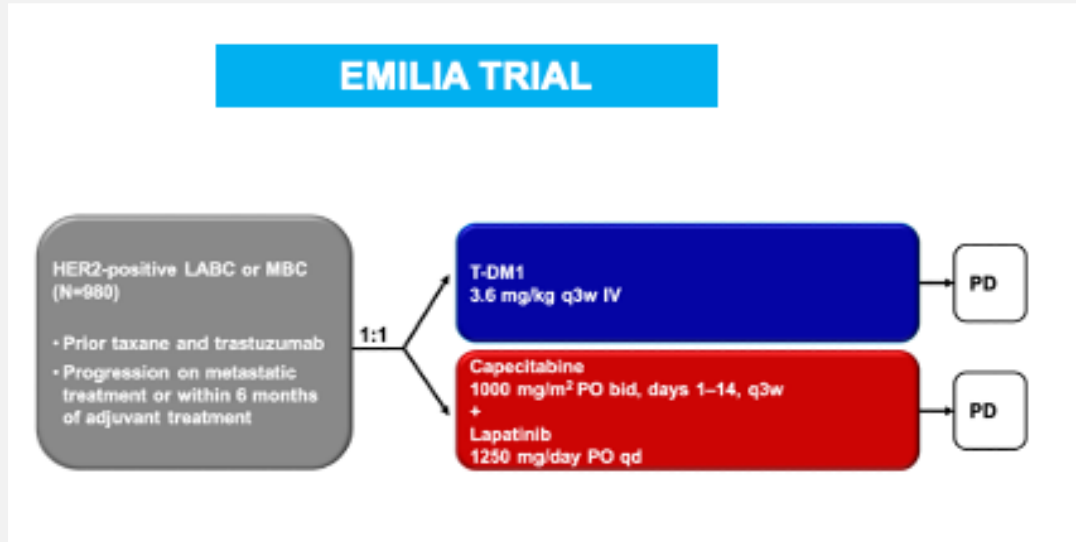

### HER3:

Signaling and targeted therapy in BC

# Current standard treatment: First Line:

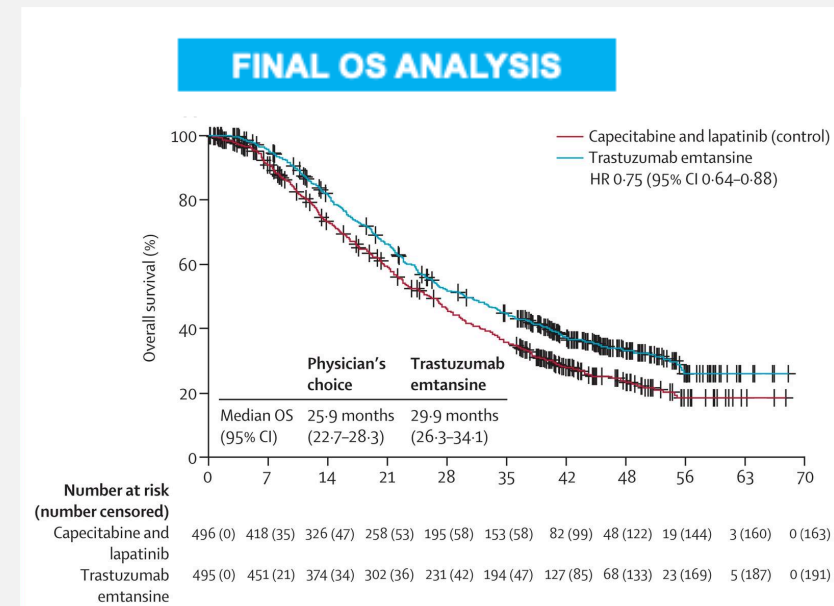

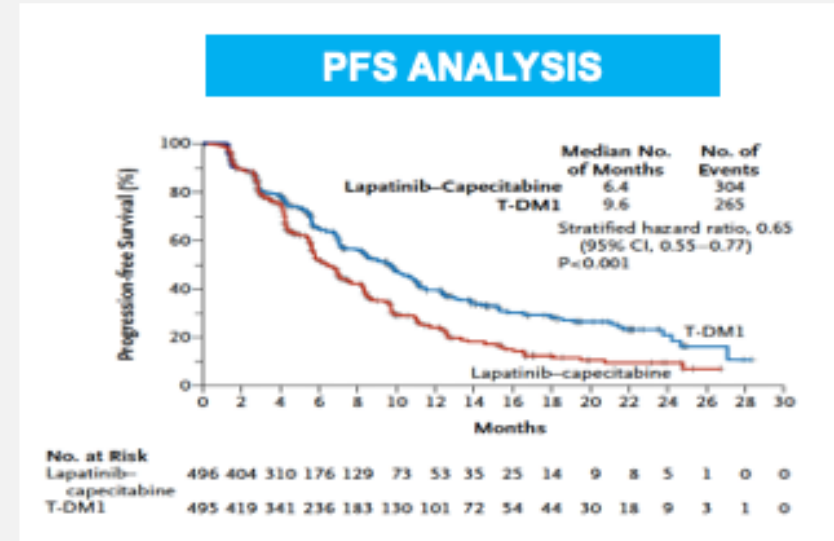

## Current standard treatment: Second Line

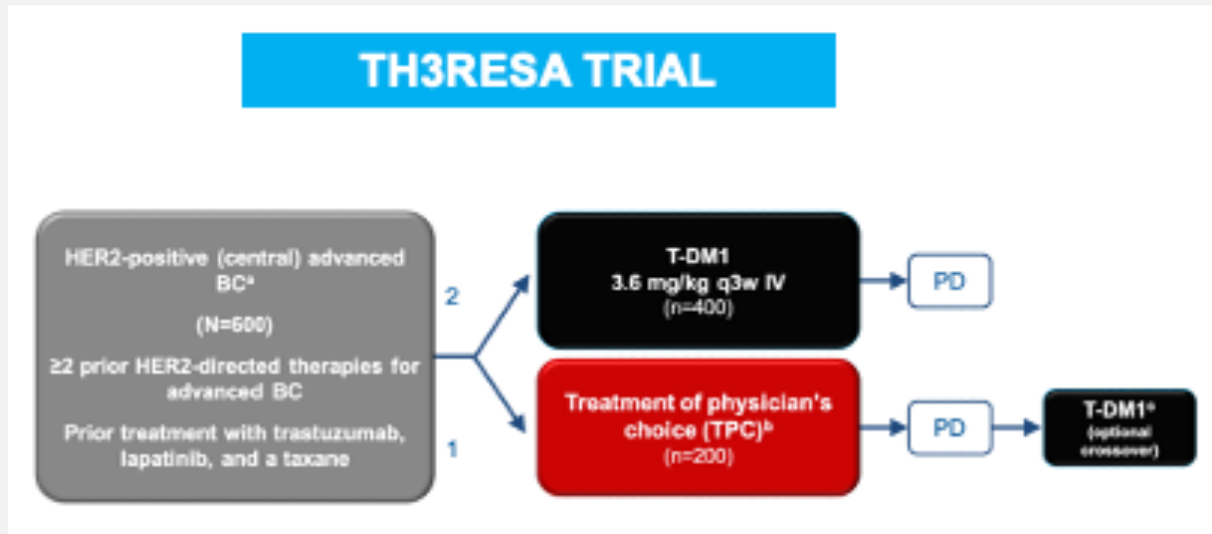

**Stratification factors:** World region, number of prior chemo regimens for MBC or unresectable LABC, presence of visceral disease

**Primary endpoints:** PFS by independent review, OS, and safety

## Third line options and beyond

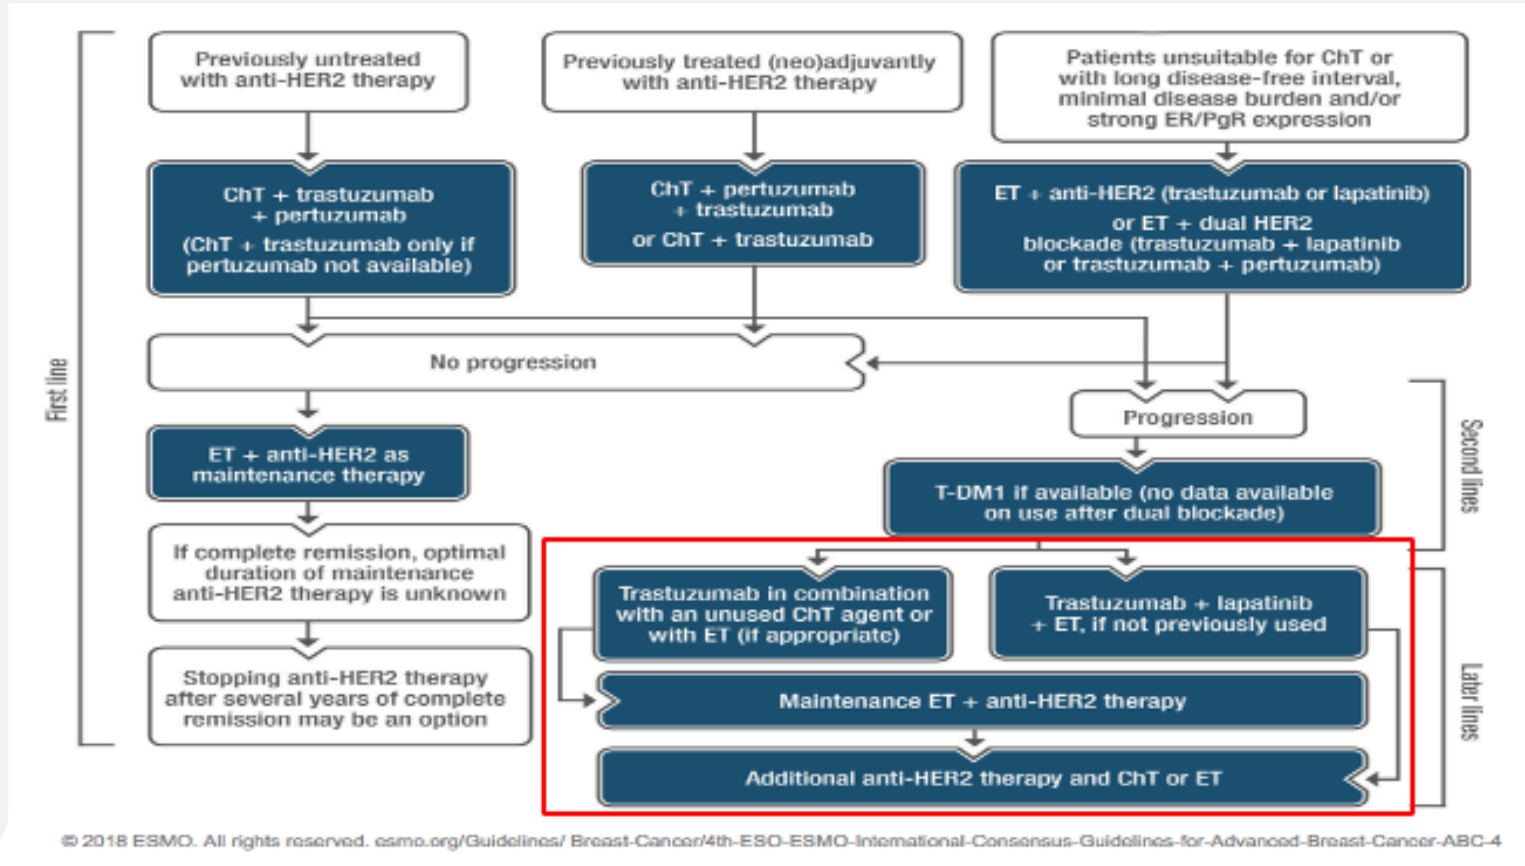

- **Stratification factors:** World region, number of prior regimens for advanced BC, d presence of visceral disease
- **Co-primary endpoints:** PFS by investigator and OS
- **Key secondary endpoints:** ORR by investigator and safety

## Third line options and beyond:

There is insufficient evidence to recommend a specific regimen and in general, it is at the physician discretion what is prescribed taking into account patient's preferences and adverse events of each regimen.

\* Include in clinical trials when available

## Recent efficacy and safety results in the post T-DM1 setting

# Novel Anti-HER2 Abs: Margetuximab

### Trastuzumab

**Fab:**

- Binds HER2 with high specificity
- Disrupts signaling that drives cell proliferation and survival

**Fc:**

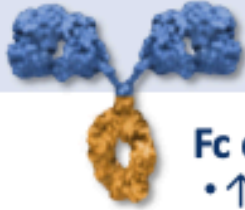

- Wild-type immunoglobulin G1 (IgG1) immune effector domains
- Binds and activates immune cells

### Margetuximab<sup>1,2</sup>

**Fab:**

- Same specificity and affinity
- Similarly disrupts signaling

**Fc engineering:**

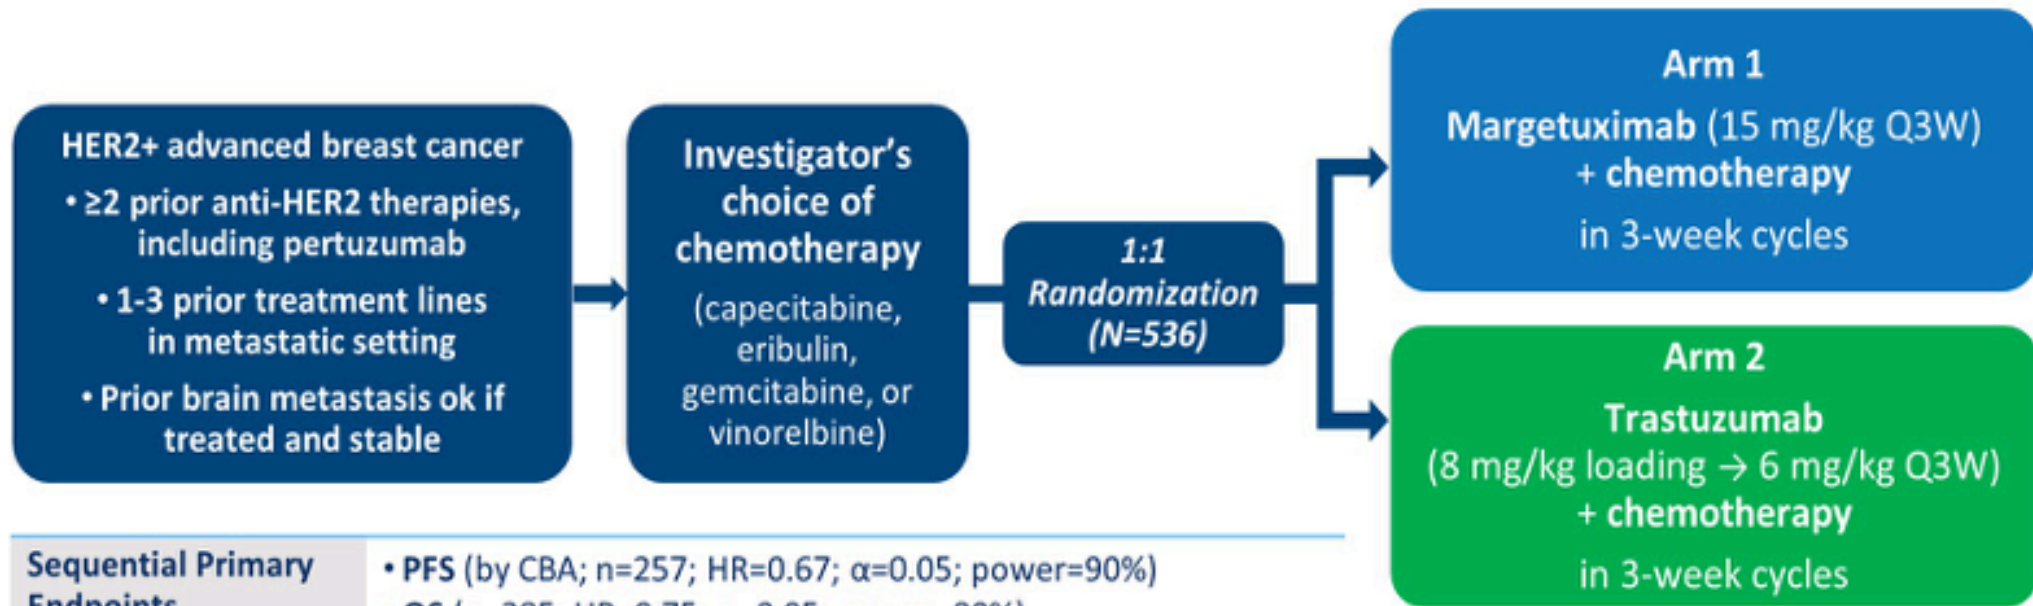

- ↑ Affinity for activating FcγRIIIA (CD16A)
- ↓ Affinity for inhibitory FcγRIIB (CD32B)

**Margetuximab Binding to FcγR Variants:**

Receptor Type	Receptor	Allelic Variant	Relative Fc Binding	Affinity Fold-Change
Activating	CD16A	158F	Lower	6.6x ↑
		158V	Higher	4.7x ↑
	CD32A	131R	Lower	6.1x ↓
		131H	Higher	↔
Inhibitory	CD32B	232I/T	Equivalent	8.4x ↓

## Neratinib: An irreversible pan HER TKI

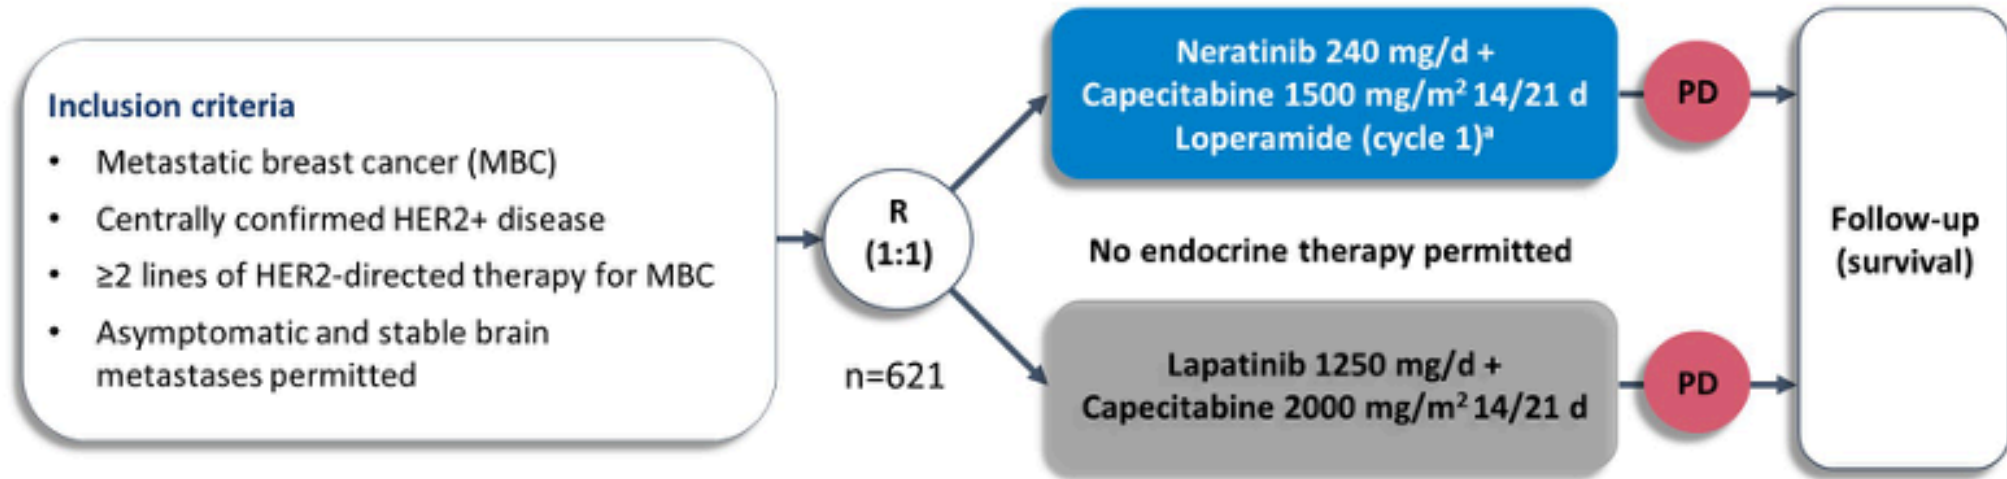

- Neratinib: pan-HER (HER1, 2, and 4) TKI
- Breadth of targets for neratinib in HER family of receptors (HER1, 2, and 4 for neratinib; HER1 and 2 for lapatinib)
- Neratinib binds irreversibly to HER1, 2, and 4; lapatinib binds reversibly

- Gene amplification
- Receptor overexpression
- Somatic mutations

# Trastuzumab Deruxtecan (DS-8201) is a Novel ADC Designed to Deliver an Optimal Antitumor Effect<sup>1-4</sup>

## Trastuzumab deruxtecan is an ADC composed of 3 components:

- A humanized anti-HER2 IgG1 mAb with the same amino acid sequence as trastuzumab, covalently linked to
- A topoisomerase I inhibitor payload, an exatecan derivative, via
  - A tetrapeptide-based cleavable linker

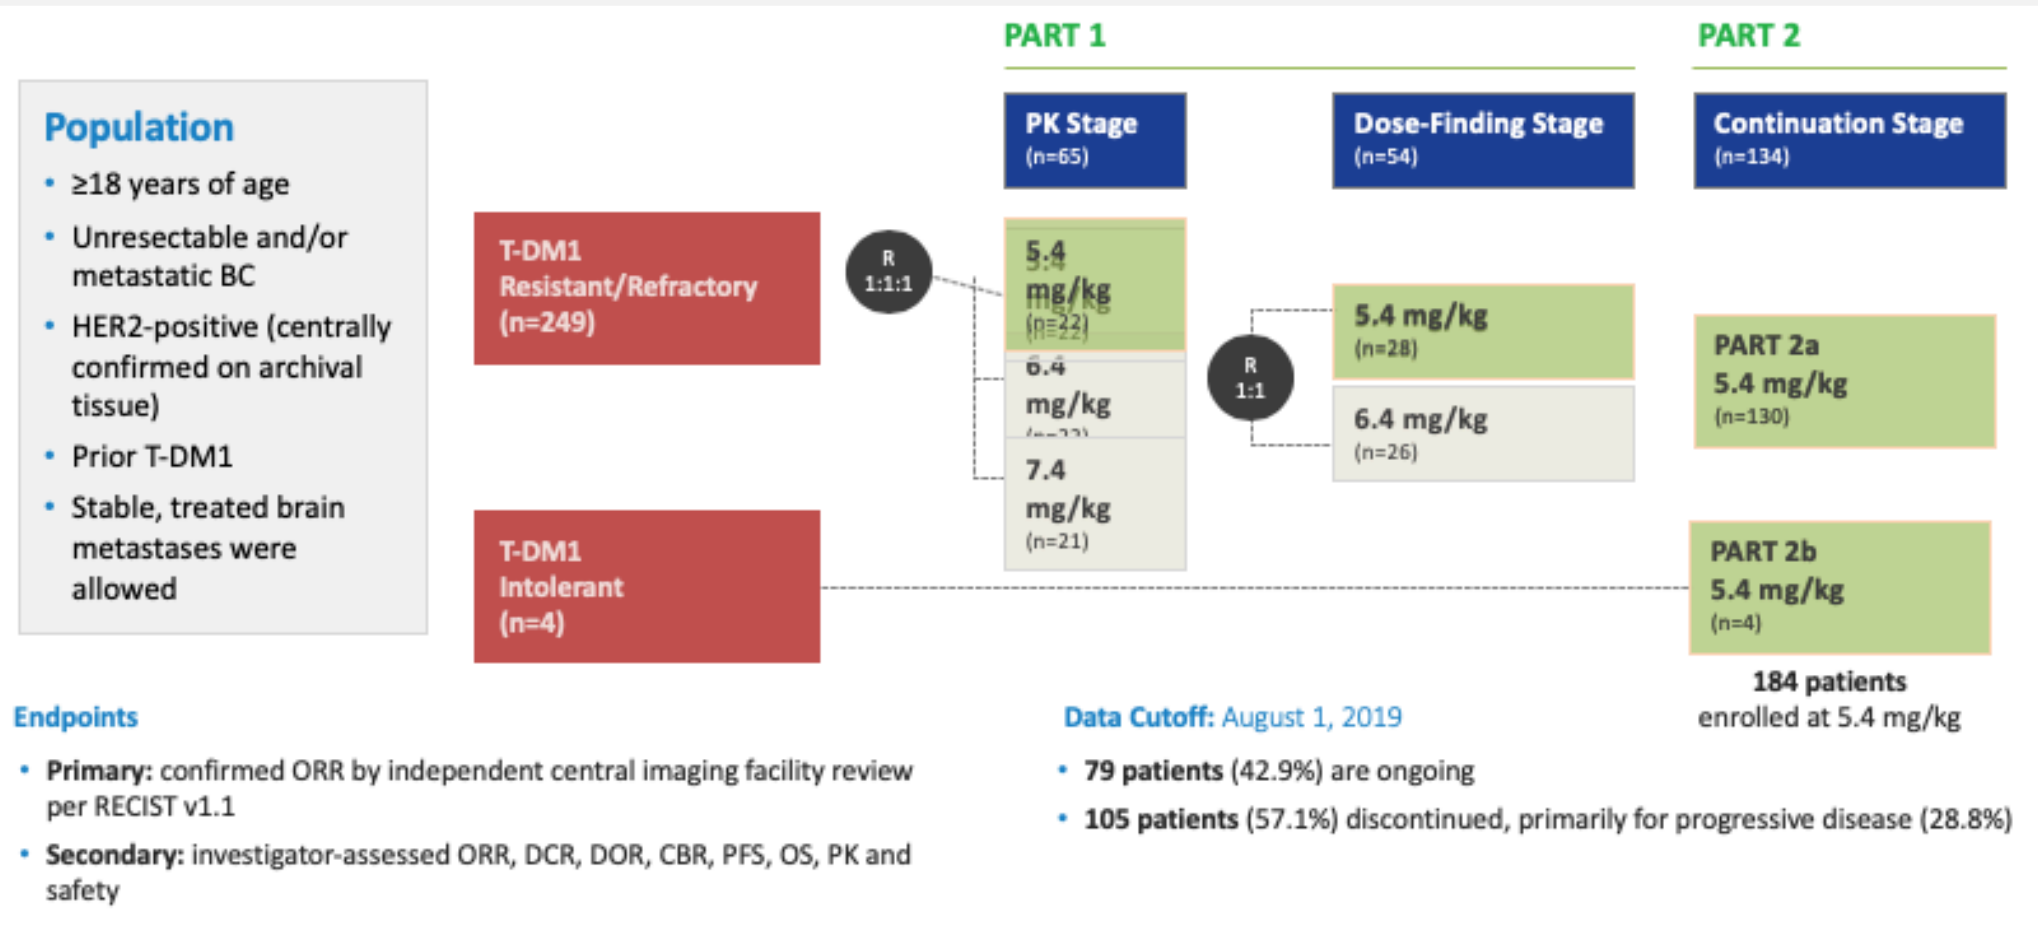

- 1** Payload MOA: topoisomerase I inhibitor
- 2** High potency of payload
- 3** High drug to antibody ratio  $\approx 8$
- 4** Payload with short systemic half-life
- 5** Stable linker-payload
- 6** Tumor-selective cleavable linker
- 7** Membrane-permeable payload

# HER Kinase inhibition in patients with HER2- and HER3-mutant cancers

## Extended Data

**HER2 or HER3 mutations (documented by local testing)**

**Primary endpoint**

- Objective response rate at week 8 (ORR<sub>8</sub>)

**Secondary endpoints**

- ORR (confirmed)
- Clinical benefit rate (CBR)
- Progression-free survival (PFS)
- Safety
- Biomarkers

**Simon 2-stage design**

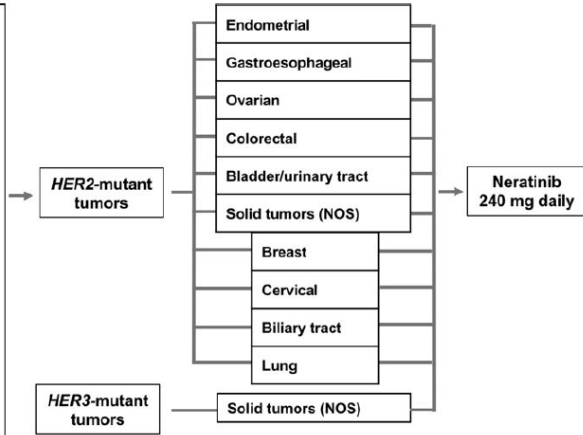

- If ≥1 response in first evaluable 7 patients, expand cohort to Stage 2 (N=18)
- If ≥4 responses in Stage 2, expand or breakout

**Tumor assessments**

- RECIST v1.1 (primary criteria)
- PET response criteria (RECIST non-evaluable)

**Statistical methods**

- ORR<sub>8</sub>, ORR, CBR: associated 95% CI
- Median PFS: Kaplan-Meier estimate with 95% CI

# Conclusions

---

- ✓ Patients with HER2+ MBC have substantially improved outcomes with the introduction of the double blockage with trastuzumab and pertuzumab in the first line setting and T-DM1 beyond first line progression.
- ✓ Despite these important therapeutic advances, most patients will eventually relapse and get somehow resistant. Novel therapeutic options with efficacy in third line and beyond showed great benefits to improve patients outcomes
  - FDA approval for neratinib, DS-8201 and tucatinib. Margetuximab under review
  - Eagerly awaited EMA approval for these drugs: tucatinib under review
- ✓ In order to decide on the best strategy following progression beyond second line, we may consider:
  - Efficacy and toxicity profile of each drug
  - Clinical characteristics of patients
  - Previous treatments received and responses achieved
  - Biomarker analysis from each trial that may identify patients that could benefit differently from each treatment
- ✓ Some promising anti HER3+ therapies under development. Stay tuned to this topic as potential new opportunities for a new HER3+ population and anti-HER3 treatments
